

Brake Linings

Making friction parts even better than they ever were.

ETERNUM supplies high quality pressed and woven friction materials, both in sheet and roll form, and also finished brake blocks and shoes. Our products are used for most common industrial and maritime applications.

All work regarding brake linings, including riveting and vulcanization, is carried out in our modern workshop in The Netherlands. ETERNUM solves many problems regarding brake systems such as early wear, squeaking brakes and glazing linings.

Friction Bands for winches

- Brake lining ETERNUM 9850+
- High and constant friction values
- Very good fading resistance
- Asbestos free
- One stop shop
- Complete overhaul including refurbishment of joints, realignment of the steel and coating
- Short lead times

Brake discs

- Stress concentrations eliminated
- Uniform stress distribution and lower peak stresses to increase fatigue strength
- Smaller fins for increased cooling surface
- Elimination of rivets
 - high strength - high temperature resistant adhesive
 - 30% thicker brake disc core
 - 40% more wear thickness
 - No localized heat transfer
- Application specific friction material

Brake lining

- Brake lining ETERNUM 9850+
- Asbestos free
- Certified by Bureau Veritas
- Custom made
- Thickness range from 3 - 30 mm
- Width up to 410mm
- Length up to 10.000 mm
- Available from stock
- Short delivery times
